ABHISHEK PAWAR

Electrical and Software Enthusiast | B.Tech Electrical and Computer Engineering Student
Chhatrapati Sambhajinagar, Maharashtra, India | +91 9545985750 | abhishekpawar954598@gmail.com
linkedin.com/in/abhipawar81 | github.com/abhipawar81

SUMMARY

Final-year Electrical and Computer Engineering student (Minor in Cybersecurity) with hands-on experience in embedded, software, and full-stack web development. Strong foundation in C, C++, data structures, operating systems, and Linux. Built end-to-end hardware-to-cloud solutions. Looking for a Software Engineer role.

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Java
Core Computer Science: Data Structures and Algorithms, Object-Oriented Programming (OOP), Operating Systems Concepts
Operating Systems and Networking: Linux
Databases: SQL, CRUD Operations, PostgreSQL, MongoDB
Web and Cloud: React, Node.js, Express.js, REST API, HTML, CSS, Git, GitHub
AI and Automation: LLM API Integration, Prompt Engineering, AI-Powered Applications
Cybersecurity: Web Application Security, Authentication and Authorization, Network Security

EDUCATION

B.Tech, Electrical and Computer Engineering (Minor in Cybersecurity) 2023 – Early 2027
Jawaharlal Nehru Engineering College, MGM University *Chhatrapati Sambhajinagar, Maharashtra, India*
Relevant Coursework: Data Structures, Operating Systems, Computer Networks, Object-Oriented Programming, Cybersecurity

Higher Secondary Education (89%)
S. B. College of Science *Chhatrapati Sambhajinagar, Maharashtra, India*

PROJECTS

Bot Detection System Python | Machine Learning | Web Security
- Built a bot detection system that distinguishes automated traffic from human users by analyzing behavioral features such as request rate, timing patterns, and session activity.
- Trained and evaluated a classification model to flag suspicious clients, and logged detections for review.

Network Intrusion Detection System Python | Wireshark | TCP/IP | Cybersecurity
- Built a two-stage machine-learning intrusion detector on the UNSW-NB15 dataset (175,341 training and 82,332 test flows): Stage 1 flags traffic as normal or malicious, and Stage 2 names the attack type.
- Compared Random Forest, Decision Tree and XGBoost, and tuned the alert threshold on a validation split to cut false alarms from about 27% to 17%. The Random Forest detected 95.7% of attacks, and XGBoost reached a ROC-AUC of 0.984.

AI-Powered Assistant Python | LLM API | REST APIs
- Built an AI-powered conversational assistant that answers user queries and automates routine tasks through LLM API integration.
- Implemented backend request handling and response processing to deliver the assistant through a simple user interface.

WORK HISTORY

Freelance Web Developer Chhatrapati Sambhajinagar, India
- Digitized a manual, paper-based business workflow by building a CMS-based website, eliminating manual scheduling errors, and improving record-keeping.
- Built online appointment booking and service management features, enabling customers to self-book and reducing phone-based scheduling.
- Integrated AI-powered features to automate selected business processes such as customer inquiries and scheduling support.
- Designed and developed a responsive, mobile-friendly website that improved the salon’s online presence and customer experience.
